

Choosing the right output format improves clarity and usability.

1 Code Format

Used for executable or structured programming output.

Example

Prompt:

Write a Python function to calculate factorial.

Output:

```
def factorial(n):  
    if n == 0:  
        return 1  
    return n * factorial(n - 1)
```

2 Plain Text Format

Standard human-readable explanation without structure.

Example:

Machine learning allows systems to learn patterns from data without explicit programming.

3 Markdown Format

Structured formatting using headings, lists, and tables.

Example:

Advantages of Cloud Computing

- Scalability
 - Cost efficiency
 - High availability
-

4 Code Block Format

Used to preserve formatting for logs, configs, or data.

Example:

Server Status:
CPU Usage: 40%
Memory Usage: 65%

5 Image Generation Output

LLMs can generate images or provide image prompts.

Example Prompt:

Create an image of a futuristic smart city at sunset.

6 File Formats

LLMs can generate content suitable for exporting into files.

DOC Example

Title: AI in Education
Introduction: Artificial Intelligence is transforming learning systems.

Excel / CSV Example

Name, Score
John, 85
Sara, 92

7 Flowchart Format (Mermaid)

Mermaid is a text-based diagram syntax for generating flowcharts.
